You can administer the following resources:

<input type="checkbox"/>	imxpassword	Password1
<input type="checkbox"/>	imxusername	admin

Total 2

A1. Which of the following is a legal identifier in java ?

1. 2variable
2. #myvar
3. +@svar
4. \$_myvar

A2. Which of these is NOT valid keyword or reserved word in Java ?

1. default
2. null
3. String
4. volatile

A3. Which is the legal range of values for a short ?

1. -128 to 127
2. -256 to 255
3. -32768 to 32767
4. 0 to 65535

A5. Which of the following Array declaration statement is illegal ?

1. int [] a [] = new int [4] [4].
2. int a [] [] = new int [4] [4].
3. int a [] [] = new int [] [4].
4. int [] a [] = new int [4] [].

A6. What will happen if you try to compile and run the following code ?

```
public class Test
{
    public static void main(String argv[])
    {
        int[] arr = new int[] {1,2,3};
        System.out.println(arr[1]);
    }
}
```

1. 1
2. Error: arr is referenced before it is initialized
3. 2
4. Error: size of array must be defined

setDescription

```
public void setDescription(String inDescription)
```

Updates the description of this station.

Parameters:

inDescription - String station description.

Introscope as provided by SAP is SAP's intellectual property. Using these features is limited by SAP and can only be used in a non-restricted manner through the SAP Extended License or SAP License for SAP 5/21/2018 Installation Guide of the Wily Introscope 9.1.5.0 4/37Introscope for SAPIntroscopeVersion 9 Installation Guide for SAP (7/5/2013) Page6Revision of the Installation and Configuration Process IntroscopeEnterprise Manager (central server component) The Enterprise Manager is typically installed on the Solution Manager host. Alternatively, you can install Enterprise Manager on a separate host. Memory and CPU requirements for Enterprise Manager depend on the number of Introscope agents that connect and the complexity of theironitored systems. Typically, for up to ten agents, the default configuration using512MB Java heap (about 1GB of main memory) will be enough. For about twenty additional agents, add 512MB of Java heap to a total of 1024MB (allow the main memory of 2GB). More details about the sizing and monitoring of Enterprise Manager can be found in the FAQ attached to the SAP 797147 note. Java Agent Introscope (on managed system) The Java Agent setting is typically performed centrally via avaj avaj ossecomp led onretni'lla otugese eneiv etnega1,avaJ MV al odnaivair enoizavitta1 opoD .otiuges id ottircsed emoc, airassecen "À elaunam enoizallatsni'1 ilanoizecce isac ni oloS .reganaM noituloSni otitseg putes the system monitored. Host-Level Introscope Agent(on managed system) The so-called Introscope Host Adapter is performed as part of the diagnostic agent in the diagnostic process to collect data on the operating system level, for example, dasapocsl, GC logs, ABAP and TREX instances. The host adapter generates less load on the Enterprise Manager than a normal agent. For this reason, it should not be included with the same weight in the calculation of memory size above. The hostadapter is configured automatically by the configuration of the managed system. Optionally, you can install the introscope workspace on the EnterpriseManager host or any client PC. Consult the next section for recommendations on the user interface for the telescope introduction. Decide about the user interface for the introscopeThere are three different options to access the Introscope:1. Introscope Workstation: Swing-based client interface, full functionality. Explicit installation on the client PC you want to use it (seeChapter5).b. Use Java WebStart to download the workstation on request from Enterprise Manager. No explicit installation of the Workstation is required. Java 5 or later must be installed on the client PC, default URL . The workstation will only be downloaded from another side and is then stored on the client PC. For every new start of the Workstation, the cache version is checked against the Enterprise Manager and, if the Enterprise Manager has been updated, a new version is automatically downloaded. /emhost:8081/workstation Wily 9.1.5.0 5/37Introscope Installation for SAPIntroscopeVersion 9 Installation Guide for SAP (7/5/2013) Page52. IntroscopeUser interface based on the browser, use the Microsoft Silverlightbrowser plugin. In some limited functionality details. WebView is available by default on Enterprise Manager (no necessary installation), default default general using the Workstation should be preferred to WebView since it is more powerful.The most convenient option is to use 1b (Launch Workstation via Java Webstart). Thebinaries are then only downloaded once and after that cached on the client PC. You mayalso decide to install the workstation explicitly on your client PC (1a).Introscope AccessAfter installation, you can use the following default credentials to access Introscope:User Password Access RightsAdmin Admin89 read, run_tracerGuest guest12 readNote that the credentials are case-sensitive. Furthermore, you can addlive_agent controland historical_agent controlpermissions to the Adminuser ifyou want. Please refer to the user management section in Chapter 7 for details.The Installation ProcessThe Introscope installation process consists of the following steps:1. Check SAP Notes 797147 and1565954for latest updates to the installation procedureand to this document. A list of frequently asked questions for troubleshooting theinstallation is also attached to Note 797147.2. Download installation files from SAP Service Marketplace.3. Install the Introscope Enterprise Manager on the central monitoring system and addthe management modules.4. Install the Introscope Java agents and host agents on managed systems.5. Optional: Install the Introscope Workstation.Obtain the Latest File VersionsSAP Notes and WikiSAP Note 797147 is the central entry point for up to date information regarding theinstallation of Introscope. Review the latest version of this note before you start theinstallation. You also find a list of frequently asked questions attached to the note.SAP Note 1565954 (Introscope 9 Release Notes) provides recent information specific toIntroscope 9 releases like known problems and installation guide of the astoscope Wily 9.1.5.0 6/37Introscope for SapintroscopeRe 9 Installation for SAP (7/5/2013) Page6 The Wiki section of the atroscope is located through this URL on the SAP Community Network: http://wiki.sdn.sap.com/wiki/display/techops/rea_introscope_homedownload The external package of third parties components of the Cathe Introscope program 9.1.5.0 requires package files of third-party external components. Before starting an installation or update, you need to download these files to the network. To download the packet files of third-party external components:1. Go ahttp://opensrcd.ca.com/ps/osgi/2. Download the following files from the subdirectory for the current release (Introscope 9.1.5.0): Eula.txt the OSGIPACKGES archive appropriate for your system: O OSGIPACKGES.V9.1.5.0.Windows.zip, for a Windows Osgipacks system system .V9.1.5.0.unix.tar, for a UNIX system (including IBM I) save the files in the same directory as the executable introscope installer. The installer automatically locates this file during the installation process. Note: the Instal to use the Neoload module for CA APM, it is necessary to install the Synthetic User Field Pack extension in the Java APM agent for Java applications. For example, to modify a J2EE. PBD files for an Apache-TomCat server on Windows: C:\ Program Files \ apache-Tomcat-5.5.12 \ WILY \ J2E.PBD, it is necessary: replace the keywords HttServlettracer with synthghttsservlettracer. Find the line that starts with: traceonemethodwithparametersiffagld: httpsservlettypespecificsvicercing immediately add the two following lines. FIRST LINE: Single line: Settrainclassmapping: SynthtPServlettracer Com.wily.introscope.Agent.Race.SynthtTPServlettracer Com.wily.introscope.Probebuilder.Validate.ResourceNamevalidate second line: Settracer Parameter: synthghtghvervlettracer Useblame ATTENTION: It is recommended to copy the correct lines by the sample J2E_SAMPLE.PBD J2EE_SAMPLE.PBD located in the /conf/ca apm/ directory For example, to edit an IntroscopeAgent.profile file for an Apache-Tomcat server on Windows: C:\Program Files\apache-tomcat-5.5.12\wily\IntroscopeAgent.profile, the following elements are required: The two keys under the Transaction Tracer Configuration heading must not start with the # character and must be filled in as follows:introscope.agent.transactiontracer.userid.method=HttpServletRequest.getHeader introscope.agent.transactiontracer.userid.key=SyntheticID The three keys under the URL Grouping Configuration heading must not start with the # character and must be filled in as follows:introscope.agent.urlgroup.keys=default introscope.agent.urlgroup.group.default.pathprefix=* introscope.agent.urlgroup.group.default.format=Default Thus configured, all resources in a page are grouped under a single Default node. The last property value can be left empty to retrieve separate metrics for each request in a page. However, leaving the property value empty can result in significantly more metrics and overhead being generated by the introscope (CA APM) agent which could adversely affect the performance of the monitored applications.See the CA APM documentation for more details on configuring URL grouping. Warning: It is recommended to copy the correct lines from the IntroscopeAgent.java sample.profile sample file located in the /conf/ca apm/ directory. To install the Synthetic User Field Pack extension in the Java agents Install a CA APM (Introscope) Java agent (version 7.x or above) on the server hosting the application to be monitored. Copy the /conf/ca apm/SynthHttpServletTracer.jar file into the CA APM Java agent ext directory. Edit the j2ee.pbd file in the CA APM Java agent installation directory. Edit the IntroscopeAgent.profile file in the CA APM Java agent installation directory. Restart the application server to asac asA .itacifdom elif i
